# 2,4-D-2,4,5-T AMINE AND ESTER BRUSH KILLERS

(Low Volatility Type)

## FOR MIXED STANDS OF BRUSH

### DU PONT 2,4-D-2,4,5-T AMINE BRUSH KILLER

This product is a standard half and half formulation of 2,4-D and 2,4,5-T amines—containing 2 pounds acid equivalent of each acid. It is generally recommended for control of stands of brush where there are several species—some susceptible to 2,4-D and some requiring 2,4,5-T. Compared with the low volatility type ester combination, the amine combination is even less volatile and works a little more slowly. It is soluble in water. A spreader-sticker should be used with spray solutions.

**ANALYSIS:** ACTIVE INGREDIENTS—Dimethylamine 2,4-Dichlorophenoxyacetate (2,4-Dichlorophenoxyacetic Acid Equivalent 20.5%) . . . . . 24.7%  
Ethyl Amine 2,4,5-Trichlorophenoxyacetate as Triethylamine Salt (2,4,5-Trichlorophenoxyacetic Acid Equivalent 20.5%) . . . . . 28.6%  
INERT INGREDIENTS . . . . . 46.7%

**DESCRIPTION:** A brown liquid. One gallon contains 2 lbs. 2,4-D and 2 lbs. 2,4,5-T acid equivalent. Each gallon weighs 9.76 lbs. at 68° F. This product freezes below 25° F. If frozen, warm to 40° F. and agitate before using.

#### PACKAGE SIZES

30-gal. drums (non-returnable)

5-gal. drums (non-returnable)

1-gal. cans (6 to case)

### DU PONT 2,4-D-2,4,5-T ESTER BRUSH KILLER (Low Volatility Type)

This product is a standard half and half formulation of 2,4-D and 2,4,5-T esters, containing 2 pounds acid equivalent of each acid. It is soluble in oil and emulsifiable in water. It is generally recommended for control stands of brush where there are several species—some susceptible to 2,4-D and some requiring 2,4,5-T. Recommended for foliage spraying, stump treatment and basal stem treatment. Low volatility type glycol base ester considerably reduces the danger of vapor damage to sensitive crops as presented by conventional esters.

**ANALYSIS:** ACTIVE INGREDIENTS—2,4-Dichlorophenoxyacetic Acid, Propylene Glycol ( $C_3H_6O$  to  $C_9H_{18}O_3$ ) Butyl Ether Esters . . . . . 34.8%  
2,4,5-Trichlorophenoxyacetic Acid, Propylene Glycol ( $C_3H_6O$  to  $C_9H_{18}O_3$ ) Butyl Ether Esters (2,4,5-Trichlorophenoxyacetic Acid Equivalent 21.5%) . . . . . 33.0%  
INERT INGREDIENTS . . . . . 32.2%

**DESCRIPTION:** A reddish-brown liquid. One gallon contains four pounds total acid equivalent per gallon. (Acid equivalents: 2 lbs. 2,4-D and 2 lbs. 2,4,5-T.) Each gallon weighs 9.3 lbs. at 68° F. It is emulsifiable with water and miscible with oil.

#### PACKAGE SIZES

50-gal. drums (non-returnable)

30-gal. drums (non-returnable)

5-gal. drums (non-returnable)

1-gal. cans (4 to case)

See other side for recommended uses

# 2,4-D-2,4,5-T AMINE AND ESTER BRUSH KILLERS

(Low Volatility Type)

FOR MIXED  
STANDS OF  
BRUSH

## DU PONT 2,4-D-2,4,5-T AMINE BRUSH KILLER

Similar in use to the ester combination, except it is slower in visible signs of reaction and may be used with less risk of damage from vapors to adjacent susceptible crops.

### HOW TO USE

Spray foliage at full leaf stage from two weeks to a month before frost. Use 3 to 4 quarts of 2,4-D-2,4,5-T Amine Brush Killer in 100 gallons of water, wetting leaves, trunks and shoots thoroughly. Addition of 4 ounces

Spreader-Sticker per 100 gallons of solution aids in wetting. Pressures up to 250 lbs. are desirable.

Usually a single treatment per year is sufficient, but with certain species and in some regions additional applications may be required on regrowth.

## DU PONT 2,4-D-2,4,5-T ESTER BRUSH KILLER

(Low Volatility Type)

This combination controls many species of brush, including raspberry and blackberry brambles, aspen, elders and elderberry, wild cherry, willow, birch, alder, hickory, elm, honeysuckle, black locust, some oaks, sweet gum, osage orange, poison ivy, poison oak, sumac, and tree-of-heaven. It gives maximum control at minimum cost for material and has no tendency to corrode equipment. This ester combination is most suitable for use where short-term control of certain low brush is required, and where there is no danger of spray drift reaching cropland or valuable growth. It is particularly effective where such species as willows, osage orange, and box elders predominate and are easily accessible for repeated applications.

### HOW TO USE

**Foliage Spray**—Use 3 to 4 qts. to every 100 gallons of water. Good control of some species may be had with about 200 to 300 gallons per acre for brush 5 to 6 feet high. It is generally more economical to cut brush over 15 to 20 feet high and treat stumps.

**Dormant Basal Stem Treatment**—Brush and small trees can be controlled by spraying the basal parts of stems and trunks, thoroughly wetting so that run-off is obtained at ground line. Use a well-mixed solution of 6 gallons of 2,4-D-2,4,5-T Ester Brush Killer in 94 gal-

lons (1 pt. in 2 gals.) of diesel oil, fuel oil, or kerosene. Apply at any time, however, best results are obtained from December to Bud Break.

**Cut Stump Treatment**—If brush is tall, it may be desirable to cut close to the ground and spray stumps with 1 pint of 2,4-D-2,4,5-T Ester Brush Killer mixed with 2 gallons of kerosene or diesel oil. All cut surfaces and exposed bark must be thoroughly wetted so that run-off is obtained at ground line. Sprouting is best prevented by treated freshly cut stumps. If sprouts develop, spray when 3 to 4 ft. tall with 2 to 3 quarts in 100 gallons of water.

### GENERAL PRECAUTIONS

Brush Killers containing 2,4,5-T should not be applied on or near crops. It is not intended for use as a selective herbicide.

Keep 2,4,5-T and 2,4-D from contact with seeds. Also prevent contact with fertilizers, insecticides, fungicides, because even slight contamination with 2,4,5-T or 2,4-D may make them injurious to plants. Do not use brush control equipment to apply insecticides or fungicides. Avoid contamination of water, whether for irrigation or domestic use.

Apply 2,4,5-T or 2,4-D with extreme care, as spray drift and possible vapors from these brush killers are extremely toxic to many crop plants and ornamentals. Coarse sprays are less likely to drift. Application by plane should not be made during the growing season in areas where sensitive crops are located nearby.

For detailed recommendations on the use of Du Pont agricultural chemicals in your area, consult local, state, or federal authorities.

On all chemicals, always follow directions for application. Where warning or caution statements on the use of the product are given, read them carefully. For specific recommendations on use of pest control chemicals in your area, consult your Federal, State or local authorities.
